Final Project

Peer Evaluation

Based on the peer-evaluation session in the class the following are the feedbacks we got from the other group (name of group:

DiffMRR_Visualization, Melody Chang):

1. The tooltip can display more details such as “Outflows of foreign population by nationality”, “Stock of foreign-born population by country of birth” and “Inflows of asylum seekers by nationality”. This is a compact way of delivering more details on a per-country basis.
2. An interesting idea was a way to select two different countries for comparing the immigration patterns. Juxtaposing two countries in two different views is a good way to examine them.
3. A good suggestion was to zoom into a country or region so that the animation becomes less clustered and visually more distinct. This is important because according to the dataset the immigration to the United States has increased over the past decade.

We will keep all these ideas while working in the project and make sure that we extract the maximum benefits from the ideas suggested.
